

While importing Select class for dropdown element make sure it should be added from **org.openqa.selenium.support.ui** package but not from the **org.apache.bcel.generic** package

```
WebDriver driver=new ChromeDriver();
Select dropdown = new Select(driver.findElement(By.id("ID")));
                dropdown.selectByVisibleText("Visible Text on UI");
```

Try to use xpath method for dropdown instead of select object if the project is working with **org.apache.bcel.generic** package .

```
driver.findElement(By.xpath("//select[@id='ID']/option[@attribute='Value'])).click();
```
